Volume 144 1997 UK ISSN 1350–2395

HONORARY EDITORS

Prof. B. V. Jayawant (*Universuty of Sussex*)
Prof. K. Warwick (*University of Reading*)
Prof. H. Unbehauen (*Ruhr-Universität Bochum*)

Pages in issues of *IEE Proc., Control Theory Appl.* 1997

Pages	Issue No.	Date
1–108	1	February
109–208	2	April
209–280	3	June
281–360	4	August
361–504	5	October
505–616	6	December

ADAPTIVE CONTROL

Adaptive control scheme using real time tuning of the parameter estimator p241
Adaptive integral control of time-delay systems p531
Adaptive performance/robust control design for discrete systems p95
Autotuning temperature control using identification by multifrequency binary sequences p233
Co-ordinated control of multiple robotic manipulators handling a common object–theory and experiments p73
Expert adaptive control applied to turbogenerator systems p2
Fourier series neural network-based adaptive variable structure control for servo systems with friction p559
Generalised predictive control (GPC): a powerful control tool in medicine p8
Implementation of a self-tuning AVR p32
Model reference adaptive control of dynamic output feedback linearisable systems with unknown high frequency gain p427
On-line adaptive control in the hot rolling of steel p15
Robust output tracking for MIMO nonlinear systems: an adaptive fuzzy systems approach p537
Robust self-tuning rotated fuzzy basis function controller for robot arms p293
Self-tuning control of an industrial pilot-scale reheating furnace: Design principles and application of a bilinear approach p25
Variable structure adaptive control of robot manipulators p167

AEROSPACE SYSTEMS

Case study comparison of robust linear quadratic design and mixed-sensitivity H_∞ control p476
Nonlinear autopilot control design for a 2-DOF helicopter model p612
Real-time identification of missile aerodynamics using a linearised Kalman filter aided by an artificial neural network p299
Robust output tracking for MIMO nonlinear systems: an adaptive fuzzy systems approach p537

AUTOMATA THEORY

Use of learning automata in distributed fuzzy logic processor training p255

BIOLOGICAL AND BIOMEDICAL SYSTEMS

Generalised predictive control (GPC): a powerful control tool in medicine p8
Intelligent signal processing of evoked potentials for anaesthesia monitoring and control p354

CLOSED LOOP SYSTEMS

Adaptive integral control of time-delay systems p531
Adaptive performance/robust control design for discrete systems p95
Autotuning temperature control using identification by multifrequency binary sequences p233
Case study comparison of robust linear quadratic design and mixed-sensitivity H_∞ control p476
Designing stabilising controllers and observers for uncertain linear systems with time-varying delay p331
Discretisation of continuous-time control systems with guaranteed stability [comment with reply] p277
Integrated approach to eigenstructure assignment by output feedback control p435
New identification based weighted H_∞ norm approximation scheme and its applications to controller reduction p61
Newton's approach to gain-controlled robust pole placement p439
Reduced-order estimator for closed-loop online estimation of cross-directional parameters in a plastics extrusion process p549
Robust control of interval plants: a time domain method p347
Robust model-following control for a robot manipulator p53
Robust pole assignment in uncertain systems p217
Time-domain method for the design of optimal linear controllers p287
Tuning PID controllers for integrating processes p385
Unified PID design method based on a maximum peak resonance specification p566

COMPUTATIONAL COMPLEXITY

Dynamic systems reliability evaluation using uncertainty techniques for performance monitoring p103

COMPUTER APPLICATIONS

Constrained time-efficient and smooth cubic spline trajectory generation for industrial robots p467
Convolved and simultaneous two-mode input shapers p515
Discrete-time model reference adaptive control for nonminimum phase systems with disturbances using approximate inverse systems p447
Exact determination of the limit cycles in relay control systems with additional nonlinearities in the feedback loops p269
Expert adaptive control applied to turbogenerator systems p2
Full fuzzy control of a DSP-based high performance induction motor drive p361
Inversion control of nonlinear systems with neural network modelling p481
On-line adaptive control in the hot rolling of steel p15
Real time stabilisation of a triple link inverted pendulum using single control input p498
Simple model of a transport/diffusion system p459

CONTROL SYSTEMS ANALYSIS

Adaptive integral control of time-delay systems p531
Analysis and redesign of an antilock brake system controller p413
Autotuning temperature control using identification by multifrequency binary sequences p233
Case study comparison of robust linear quadratic design and mixed-sensitivity H_∞ control p476
Co-ordinated control of multiple robotic manipulators handling a common object–theory and experiments p73
Constrained cautious stable predictive control p313
Control-system synthesis for open-loop unstable process with time delay p334
Convolved and simultaneous two-mode input shapers p515
Designing stabilising controllers and observers for uncertain linear systems with time-varying delay p331
Discrete-time model reference adaptive control for nonminimum phase systems with disturbances using approximate inverse systems p447
Discretisation of continuous-time control systems with guaranteed stability [comment with reply] p277
Exact determination of the limit cycles in relay control systems with additional nonlinearities in the feedback loops p269
Frequency domain design method for uncertain systems under some unknown-but-bounded disturbances p225
H_∞ robust control design for dynamic ship positioning p110
Implementation of intelligent self-organising controllers in DSP controlled electromechanical drives p324
Integrated approach to eigenstructure assignment by output feedback control p435
LQG approach for the high-precision track control of ships p121
Model reference adaptive control of dynamic output feedback linearisable systems with unknown high frequency gain p427
Multiobjective fuzzy genetic algorithm optimisation approach to nonlinear control system design p137
Neural implementation of GMV control schemes based on affine input/output models p521
New identification based weighted H_∞ norm approximation scheme and its applications to controller reduction p61
Newton's approach to gain-controlled robust pole placement p439
Nonlinear autopilot control design for a 2-DOF helicopter model p612
Optimal quadratic guaranteed cost control of a class of uncertain time-delay systems p183
Output feedback sliding mode design for linear uncertain systems p209
pH control: handling nonlinearity and deadtime with fuzzy relational model-based control p263
Quadratic guaranteed cost and disc pole location control for discrete-time uncertain systems p545
Quantitative design of uncertain multivariable control system with an inner-feedback loop p195
Real time stabilisation of a triple link inverted pendulum using single control input p498
Realisation of two-degrees-of-freedom compensators p589
Recursive identification of certain structured time-varying state-space models p489
Reduced-order estimator for closed-loop online estimation of cross-directional parameters in a plastics extrusion process p549
Robust control methodology applied to the design of a combined steering/stabiliser system for warships p128
Robust control of interval plants: a time domain method p347
Robust pole assignment in uncertain systems p217
Simulated annealing for multiobjective control system design p582
Sliding mode and fuzzy control of toggle mechanism using PM synchronous servomotor drive p393
Stability analysis of fuzzy multivariable systems: vector Lyapunov function approach p403
Time-domain method for the design of optimal linear controllers p287
Tuning PID controllers for integrating processes p385
Unified PID design method based on a maximum peak resonance specification p566

CONTROL SYSTEM SYNTHESIS

Analysis and redesign of an antilock brake system controller p413
Case study comparison of robust linear quadratic design and mixed-sensitivity H_∞ control p476
Co-ordinated control of multiple robotic manipulators handling a common object–theory and experiments p73
Control-system synthesis for open-loop unstable process with time delay p334
Convolved and simultaneous two-mode input shapers p515
Discrete-time model reference adaptive control for nonminimum phase systems with disturbances using approximate inverse systems p447
Frequency domain design method for uncertain systems under some unknown-but-bounded disturbances p225
H_∞ robust control design for dynamic ship positioning p110
Implementation of a self-tuning AVR p32
LQG approach for the high-precision track control of ships p121
Multiobjective fuzzy genetic algorithm optimisation approach to nonlinear control system design p137
Neural implementation of GMV control schemes based on affine input/output models p521
New identification based weighted H_∞ norm approximation scheme and its applications to controller reduction p61
Nonlinear autopilot control design for a 2-DOF helicopter model p612
Optimal quadratic guaranteed cost control of a class of uncertain time-delay systems p183
Output feedback sliding mode design for linear uncertain systems p209
pH control: handling nonlinearity and deadtime with fuzzy relational model-based control p263
Quadratic guaranteed cost and disc pole location control for discrete-time uncertain systems p545
Quantitative design of uncertain multivariable control system with an inner-feedback loop p195
Real time stabilisation of a triple link inverted pendulum using single control input p498
Realisation of two-degrees-of-freedom compensators p589
Robust control methodology applied to the design of a combined steering/stabiliser system for warships p128
Simulated annealing for multiobjective control system design p582
Sliding mode and fuzzy control of toggle mechanism using PM synchronous servomotor drive p393
Stability analysis of fuzzy multivariable systems: vector Lyapunov function approach p403
Time-domain method for the design of optimal linear controllers p287
Tuning PID controllers for integrating processes p385

CYBERNETICS AND ROBOTICS

Co-ordinated control of multiple robotic manipulators handling a common object–theory and experiments p73

Constrained time-efficient and smooth cubic spline trajectory generation for industrial robots p467
Dynamic systems reliability evaluation using uncertainty techniques for performance monitoring p103
Optimal planning technique with a fuzzy co-ordinator for an intelligent robot's part assembly p45
Robust model-following control for a robot manipulator p53
Robust self-tuning rotated fuzzy basis function controller for robot arms p293
Subsea vehicle path planning using nonlinear programming and constructive solid geometry p143
Variable structure adaptive control of robot manipulators p167

DATA HANDLING

Simple model of a transport/diffusion system p459

DIGITAL ELECTRONICS

Full fuzzy control of a DSP-based high performance induction motor drive p361

DISCRETE SYSTEMS

Adaptive performance/robust control design for discrete systems p95
Discrete-time model reference adaptive control for nonminimum phase systems with disturbances using approximate inverse systems p447
Discretisation of continuous-time control systems with guaranteed stability [comment with reply] p277
Neural implementation of GMV control schemes based on affine input/output models p521
Quadratic guaranteed cost and disc pole location control for discrete-time uncertain systems p545
Robust control of interval plants: a time domain method p347
Robust system identification from weighted impulse response data and worst-case error bounds p67

DISTRIBUTED PARAMETER SYSTEMS

Adaptive integral control of time-delay systems p531
Control-system synthesis for open-loop unstable process with time delay p334
Designing stabilising controllers and observers for uncertain linear systems with time-varying delay p331
Haar wavelet method for solving lumped and distributed-parameter systems p87
Newton's approach to gain-controlled robust pole placement p439
Optimal quadratic guaranteed cost control of a class of uncertain time-delay systems p183

ELECTRIC VARIABLES CONTROL

Implementation of a self-tuning AVR p32
Power control of a CO_2 laser p177

EXPERT SYSTEMS

Expert adaptive control applied to turbogenerator systems p2
Intelligent signal processing of evoked potentials for anaesthesia monitoring and control p354

FEEDBACK

Designing stabilising controllers and observers for uncertain linear systems with time-varying delay p331
Exact determination of the limit cycles in relay control systems with additional nonlinearities in the feedback loops p269
Implementation of a self-tuning AVR p32
Integrated approach to eigenstructure assignment by output feedback control p435
Inversion control of nonlinear systems with neural network modelling p481
LQG approach for the high-precision track control of ships p121
Model reference adaptive control of dynamic output feedback linearisable systems with unknown high frequency gain p427
Nonlinear internal model control using local model networks p505
Output feedback sliding mode design for linear uncertain systems p209
Quantitative design of uncertain multivariable control system with an inner-feedback loop p195
Realisation of two-degrees-of-freedom compensators p589

FORMAL LOGIC

Intelligent signal processing of evoked potentials for anaesthesia monitoring and control p354
Multiobjective fuzzy genetic algorithm optimisation approach to nonlinear control system design p137
pH control: handling nonlinearity and deadtime with fuzzy relational model-based control p263
Subsea vehicle path planning using nonlinear programming and constructive solid geometry p143
Use of learning automata in distributed fuzzy logic processor training p255

FUZZY CONTROL

Dynamic systems reliability evaluation using uncertainty techniques for performance monitoring p103
Full fuzzy control of a DSP-based high performance induction motor drive p361
Implementation of intelligent self-organising controllers in DSP controlled electromechanical drives p324
Incremental fuzzy PI control of a solar power plant p596
Learning issues in model reference based fuzzy control p605
Multiobjective fuzzy genetic algorithm optimisation approach to nonlinear control system design p137
Optimal planning technique with a fuzzy co-ordinator for an intelligent robot's part assembly p45
pH control: handling nonlinearity and deadtime with fuzzy relational model-based control p263
Robust output tracking for MIMO nonlinear systems: an adaptive fuzzy systems approach p537
Robust self-tuning rotated fuzzy basis function controller for robot arms p293
Sliding mode and fuzzy control of toggle mechanism using PM synchronous servomotor drive p393
Stability analysis of fuzzy multivariable systems: vector Lyapunov function approach p403

GENERATORS

Implementation of intelligent self-organising controllers in DSP controlled electromechanical drives p324
Sliding mode and fuzzy control of toggle mechanism using PM synchronous servomotor drive p393

INDUCTION MOTORS

Full fuzzy control of a DSP-based high performance induction motor drive p361
Implementation of intelligent self-organising controllers in DSP controlled electromechanical drives p324

INFORMATION THEORY

Adaptive control scheme using real time tuning of the parameter estimator p241
Consistent parameter estimation of systems disturbed by correlated noise p40
Intelligent signal processing of evoked potentials for anaesthesia monitoring and control p354
LQG approach for the high-precision track control of ships p121
Nonlinear filters for linear signal models p281
Real-time identification of missile aerodynamics using a linearised Kalman filter aided by an artificial neural network p299

LASERS

Power control of a CO_2 laser p177

MATHEMATICAL TECHNIQUES

Adaptive control scheme using real time tuning of the parameter estimator p241
Adaptive performance/robust control design for discrete systems p95
Case study comparison of robust linear quadratic design and mixed-sensitivity H_∞ control p476
Constrained cautious stable predictive control p313
Constrained time-efficient and smooth cubic spline trajectory generation for industrial robots p467
Design of robust observation schemes for uncertain large scale systems p369
Discrete-time model reference adaptive control for nonminimum phase systems with disturbances using approximate inverse systems p447
Dynamic system for solving complex eigenvalue problems p455
Dynamic systems reliability evaluation using uncertainty techniques for performance monitoring p103
Exact determination of the limit cycles in relay control systems with additional nonlinearities in the feedback loops p269
Givens rotation based fast backward elimination algorithm for RBF neural network pruning p381
Haar wavelet method for solving lumped and distributed-parameter systems p87
Integrated approach to eigenstructure assignment by output feedback control p435
Intelligent signal processing of evoked potentials for anaesthesia monitoring and control p354
Inversion control of nonlinear systems with neural network modelling p481
Multiobjective fuzzy genetic algorithm optimisation approach to nonlinear control system design p137
Multiple local Laguerre models for modelling nonlinear dynamic systems of the Wiener class p375
Newton's approach to gain-controlled robust pole placement p439
Nonlinear internal model control using local model networks p505
Optimal observers for disturbance rejection in two-degree-of-freedom LQI servo systems p575
Optimal planning technique with a fuzzy co-ordinator for an intelligent robot's part assembly p45
Quadratic guaranteed cost and disc pole location control for discrete-time uncertain systems p545
Realisation of two-degrees-of-freedom compensators p589
Recursive identification of certain structured time-varying state-space models p489
Simple model of a transport/diffusion system p459
Simulated annealing for multiobjective control system design p582
Stability analysis of fuzzy multivariable systems: vector Lyapunov function approach p403
Subsea vehicle path planning using nonlinear programming and constructive solid geometry p143
Unified PID design method based on a maximum peak resonance specification p566

MEASUREMENT OF SPECIFIC VARIABLES

Simple model of a transport/diffusion system p459

MILITARY SYSTEMS

Robust control methodology applied to the design of a combined steering/stabiliser system for warships p128

MODULATION

Full fuzzy control of a DSP-based high performance induction motor drive p361

MULTIVARIABLE CONTROL SYSTEMS

Case study comparison of robust linear quadratic design and mixed-sensitivity H_∞ control p476
Comparison of SISO and SIMO neural control strategies for ship track keeping p153
Design of robust observation schemes for uncertain large scale systems p369

Fourier series neural network-based adaptive variable structure control for servo systems with friction p559
Improved algorithm for multivariable stable generalised predictive control p309
Integrated approach to eigenstructure assignment by output feedback control p435
Output feedback sliding mode design for linear uncertain systems p209
Quantitative design of uncertain multivariable control system with an inner-feedback loop p195
Robust output tracking for MIMO nonlinear systems: an adaptive fuzzy systems approach p537
Sliding mode and fuzzy control of toggle mechanism using PM synchronous servomotor drive p393
Stability analysis of fuzzy multivariable systems: vector Lyapunov function approach p403
Variable structure adaptive control of robot manipulators p167

NEURAL NETS

Comparison of SISO and SIMO neural control strategies for ship track keeping p153
Dynamic system for solving complex eigenvalue problems p455
Fourier series neural network-based adaptive variable structure control for servo systems with friction p559
Givens rotation based fast backward elimination algorithm for RBF neural network pruning p381
Identification of time-varying nonlinear systems using minimal radial basis function neural networks p202
Implementation of intelligent self-organising controllers in DSP controlled electromechanical drives p324
Inversion control of nonlinear systems with neural network modelling p481
Neural implementation of GMV control schemes based on affine input/output models p521
Nonlinear internal model control using local model networks p505
Real-time identification of missile aerodynamics using a linearised Kalman filter aided by an artificial neural network p299
Reduced-order estimator for closed-loop online estimation of cross-directional parameters in a plastics extrusion process p549
Robust self-tuning rotated fuzzy basis function controller for robot arms p293
Stable receding horizon control based on recurrent networks p249
Use of learning automata in distributed fuzzy logic processor training p255

NONELECTRIC VARIABLES CONTROL

Autotuning temperature control using identification by multifrequency binary sequences p233
Co-ordinated control of multiple robotic manipulators handling a common object–theory and experiments p73
Constrained time-efficient and smooth cubic spline trajectory generation for industrial robots p467
Convolved and simultaneous two-mode input shapers p515
Implementation of intelligent self-organising controllers in DSP controlled electromechanical drives p324
Incremental fuzzy PI control of a solar power plant p596
LQG approach for the high-precision track control of ships p121
pH control: handling nonlinearity and deadtime with fuzzy relational model-based control p263
Power control of a CO_2 laser p177
Real time stabilisation of a triple link inverted pendulum using single control input p498
Robust control methodology applied to the design of a combined steering/stabiliser system for warships p128
Simple model of a transport/diffusion system p459
Sliding mode and fuzzy control of toggle mechanism using PM synchronous servomotor drive p393

NONLINEAR CONTROL SYSTEMS

Analysis and redesign of an antilock brake system controller p413
Exact determination of the limit cycles in relay control systems with additional nonlinearities in the feedback loops p269
Identification of time-varying nonlinear systems using minimal radial basis function neural networks p202
Inversion control of nonlinear systems with neural network modelling p481
Learning issues in model reference based fuzzy control p605
Model reference adaptive control of dynamic output feedback linearisable systems with unknown high frequency gain p427
Multiobjective fuzzy genetic algorithm optimisation approach to nonlinear control system design p137
Multiple local Laguerre models for modelling nonlinear dynamic systems of the Wiener class p375
Neural implementation of GMV control schemes based on affine input/output models p521
Nonlinear autopilot control design for a 2-DOF helicopter model p612
Nonlinear internal model control using local model networks p505
pH control: handling nonlinearity and deadtime with fuzzy relational model-based control p263
Real time stabilisation of a triple link inverted pendulum using single control input p498
Robust output tracking for MIMO nonlinear systems: an adaptive fuzzy systems approach p537
Stability analysis of fuzzy multivariable systems: vector Lyapunov function approach p403
Stable receding horizon control based on recurrent networks p249

NUMERICAL ANALYSIS

Constrained time-efficient and smooth cubic spline trajectory generation for industrial robots p467
Dynamic systems reliability evaluation using uncertainty techniques for performance monitoring p103
Haar wavelet method for solving lumped and distributed-parameter systems p87
Identification of time-varying nonlinear systems using minimal radial basis function neural networks p202
Inversion control of nonlinear systems with neural network modelling p481
Newton's approach to gain-controlled robust pole placement p439
Reduced-order estimator for closed-loop online estimation of cross-directional parameters in a plastics extrusion process p549
Simple model of a transport/diffusion system p459
Sliding mode and fuzzy control of toggle mechanism using PM synchronous servomotor drive p393
Subsea vehicle path planning using nonlinear programming and constructive solid geometry p143

OPTIMAL CONTROL

Case study comparison of robust linear quadratic design and mixed-sensitivity H_∞ control p476
Constrained cautious stable predictive control p313
Generalised predictive control (GPC): a powerful control tool in medicine p8
H_∞ robust control design for dynamic ship positioning p110
Implementation of a self-tuning AVR p32
Improved algorithm for multivariable stable generalised predictive control p309
Inversion control of nonlinear systems with neural network modelling p481
LQG approach for the high-precision track control of ships p121
Multiobjective fuzzy genetic algorithm optimisation approach to nonlinear control system design p137
Neural implementation of GMV control schemes based on affine input/output models p521
New identification based weighted H_∞ norm approximation scheme and its applications to controller reduction p61
Optimal observers for disturbance rejection in two-degree-of-freedom LQI servo systems p575
Optimal quadratic guaranteed cost control of a class of uncertain time-delay systems p183
Quadratic guaranteed cost and disc pole location control for discrete-time uncertain systems p545
Real time stabilisation of a triple link inverted pendulum using single control input p498
Robust control methodology applied to the design of a combined steering/stabiliser system for warships p128
Robust control of interval plants: a time domain method p347
Robust system identification from weighted impulse response data and worst-case error bounds p67
Time-domain method for the design of optimal linear controllers p287

OPTIMISATION

Quadratic guaranteed cost and disc pole location control for discrete-time uncertain systems p545
Realisation of two-degrees-of-freedom compensators p589
Stability analysis of fuzzy multivariable systems: vector Lyapunov function approach p403
Unified PID design method based on a maximum peak resonance specification p566

PARAMETER ESTIMATION

Adaptive control scheme using real time tuning of the parameter estimator p241
Consistent parameter estimation of systems disturbed by correlated noise p40
Real-time identification of missile aerodynamics using a linearised Kalman filter aided by an artificial neural network p299
Reduced-order estimator for closed-loop online estimation of cross-directional parameters in a plastics extrusion process p549
Simple model of a transport/diffusion system p459

PATTERN RECOGNITION

Givens rotation based fast backward elimination algorithm for RBF neural network pruning p381
Intelligent signal processing of evoked potentials for anaesthesia monitoring and control p354

PERFORMANCE EVALUATION

Dynamic systems reliability evaluation using uncertainty techniques for performance monitoring p103

POWER ENGINEERING COMPUTING

Full fuzzy control of a DSP-based high performance induction motor drive p361

POWER SYSTEM CONTROL

Autotuning temperature control using identification by multifrequency binary sequences p233
Full fuzzy control of a DSP-based high performance induction motor drive p361
Implementation of intelligent self-organising controllers in DSP controlled electromechanical drives p324
Incremental fuzzy PI control of a solar power plant p596

POWER SYSTEMS AND APPLICATIONS

Full fuzzy control of a DSP-based high performance induction motor drive p361
Implementation of intelligent self-organising controllers in DSP controlled electromechanical drives p324
Sliding mode and fuzzy control of toggle mechanism using PM synchronous servomotor drive p393

POWER SYSTEMS AND PLANTS

Full fuzzy control of a DSP-based high performance induction motor drive p361
Implementation of intelligent self-organising controllers in DSP controlled electromechanical drives p324
Incremental fuzzy PI control of a solar power plant p596
Sliding mode and fuzzy control of toggle mechanism using PM synchronous servomotor drive p393

PREDICTIVE CONTROL

Constrained cautious stable predictive control p313
Generalised predictive control (GPC): a powerful control tool in medicine p8
Implementation of a self-tuning AVR p32
Improved algorithm for multivariable stable generalised predictive control p309
Neural implementation of GMV control schemes based on affine input/output models p521
Robust control of interval plants: a time domain method p347

PROBABILITY AND STATISTICS

Intelligent signal processing of evoked potentials for anaesthesia monitoring and control p354

PRODUCTION ENGINEERING

Constrained time-efficient and smooth cubic spline trajectory generation for industrial robots p467
On-line adaptive control in the hot rolling of steel p15
Optimal planning technique with a fuzzy co-ordinator for an intelligent robot's part assembly p45
Reduced-order estimator for closed-loop online estimation of cross-directional parameters in a plastics extrusion process p549
Self-tuning control of an industrial pilot-scale reheating furnace: Design principles and application of a bilinear approach p25

PROGRAMMING THEORY

Dynamic systems reliability evaluation using uncertainty techniques for performance monitoring p103

SELF-ADJUSTING SYSTEMS

Adaptive control scheme using real time tuning of the parameter estimator p241
Adaptive integral control of time-delay systems p531
Adaptive performance/robust control design for discrete systems p95
Autotuning temperature control using identification by multifrequency binary sequences p233
Co-ordinated control of multiple robotic manipulators handling a common object–theory and experiments p73
Discrete-time model reference adaptive control for nonminimum phase systems with disturbances using approximate inverse systems p447
Expert adaptive control applied to turbogenerator systems p2
Fourier series neural network-based adaptive variable structure control for servo systems with friction p559
Generalised predictive control (GPC): a powerful control tool in medicine p8
Implementation of a self-tuning AVR p32
Implementation of intelligent self-organising controllers in DSP controlled electromechanical drives p324
Learning issues in model reference based fuzzy control p605
LQG approach for the high-precision track control of ships p121
Model reference adaptive control of dynamic output feedback linearisable systems with unknown high frequency gain p427
Nonlinear internal model control using local model networks p505
On-line adaptive control in the hot rolling of steel p15
pH control: handling nonlinearity and deadtime with fuzzy relational model-based control p263
Robust model-following control for a robot manipulator p53
Robust output tracking for MIMO nonlinear systems: an adaptive fuzzy systems approach p537
Robust self-tuning rotated fuzzy basis function controller for robot arms p293
Self-tuning control of an industrial pilot-scale reheating furnace: Design principles and application of a bilinear approach p25
Variable structure adaptive control of robot manipulators p167

SIGNAL PROCESSING

Consistent parameter estimation of systems disturbed by correlated noise p40
Full fuzzy control of a DSP-based high performance induction motor drive p361
Intelligent signal processing of evoked potentials for anaesthesia monitoring and control p354
Nonlinear filters for linear signal models p281

SIMULATION, MODELLING AND IDENTIFICATION

Adaptive control scheme using real time tuning of the parameter estimator p241
Autotuning temperature control using identification by multifrequency binary sequences p233
Case study comparison of robust linear quadratic design and mixed-sensitivity H_∞ control p476
Consistent parameter estimation of systems disturbed by correlated noise p40
Design of robust observation schemes for uncertain large scale systems p369
Designing stabilising controllers and observers for uncertain linear systems with time-varying delay p331
Identification of time-varying nonlinear systems using minimal radial basis function neural networks p202
Integrated approach to eigenstructure assignment by output feedback control p435
Multiple local Laguerre models for modelling nonlinear dynamic systems of the Wiener class p375
New identification based weighted H_∞ norm approximation scheme and its applications to controller reduction p61
Nonlinear internal model control using local model networks p505
Optimal observers for disturbance rejection in two-degree-of-freedom LQI servo systems p575
Real-time identification of missile aerodynamics using a linearised Kalman filter aided by an artificial neural network p299
Realisation of two-degrees-of-freedom compensators p589
Recursive identification of certain structured time-varying state-space models p489
Reduced-order estimator for closed-loop online estimation of cross-directional parameters in a plastics extrusion process p549
Reduced-order observer for large-scale systems p189
Robust system identification from weighted impulse response data and worst-case error bounds p67
Simple model of a transport/diffusion system p459
Unified PID design method based on a maximum peak resonance specification p566

STABILITY

Adaptive performance/robust control design for discrete systems p95
Case study comparison of robust linear quadratic design and mixed-sensitivity H_∞ control p476
Control-system synthesis for open-loop unstable process with time delay p334
Designing stabilising controllers and observers for uncertain linear systems with time-varying delay p331
Discretisation of continuous-time control systems with guaranteed stability [comment with reply] p277
Dynamic system for solving complex eigenvalue problems p455
Fourier series neural network-based adaptive variable structure control for servo systems with friction p559
Frequency domain design method for uncertain systems under some unknown-but-bounded disturbances p225
Generalised predictive control (GPC): a powerful control tool in medicine p8
H_∞ robust control design for dynamic ship positioning p110
Implementation of a self-tuning AVR p32
Improved algorithm for multivariable stable generalised predictive control p309
Newton's approach to gain-controlled robust pole placement p439
Nonlinear autopilot control design for a 2-DOF helicopter model p612
Nonlinear filters for linear signal models p281
Nonlinear internal model control using local model networks p505
Optimal quadratic guaranteed cost control of a class of uncertain time-delay systems p183
Output feedback sliding mode design for linear uncertain systems p209
Real time stabilisation of a triple link inverted pendulum using single control input p498
Robust control methodology applied to the design of a combined steering/stabiliser system for warships p128
Robust control of interval plants: a time domain method p347
Robust model-following control for a robot manipulator p53
Robust output tracking for MIMO nonlinear systems: an adaptive fuzzy systems approach p537
Robust pole assignment in uncertain systems p217
Robust self-tuning rotated fuzzy basis function controller for robot arms p293
Robust system identification from weighted impulse response data and worst-case error bounds p67
Stability analysis of fuzzy multivariable systems: vector Lyapunov function approach p403
Stable receding horizon control based on recurrent networks p249
Variable structure adaptive control of robot manipulators p167

SYNCHRONOUS MACHINES

Sliding mode and fuzzy control of toggle mechanism using PM synchronous servomotor drive p393

SYSTEMS THEORY

Identification of time-varying nonlinear systems using minimal radial basis function neural networks p202
Implementation of a self-tuning AVR p32
Multiple local Laguerre models for modelling nonlinear dynamic systems of the Wiener class p375
Nonlinear internal model control using local model networks p505
Robust model-following control for a robot manipulator p53

TIME-VARYING SYSTEMS

Designing stabilising controllers and observers for uncertain linear systems with time-varying delay p331
Identification of time-varying nonlinear systems using minimal radial basis function neural networks p202
Recursive identification of certain structured time-varying state-space models p489
